

John F Hunt keeps faith in Bell for demolition hauling

Demolition specialist John F Hunt has purchased three B25E Articulated Dump Trucks (ADTs) from Bell Equipment, whose small size and exceptional reliability make them ideal for land remediation on demolition sites.

The deal continues a working relationship between the firms that goes back nearly a decade, when John F Hunt first bought two D-series ADTs.

Over the past nine years, these machines have performed exceptionally, as John Yeldham, Depot Manager at John F Hunt, explains.

“The Bell dump trucks are reliable and hard working and we’ve experienced very little downtime. On the rare occasions we’ve needed help, Bell has provided a great back-up service.”

Having won a big contract, which would tie up at least several ADTs for two years, John F Hunt recognised there was an opportunity to extend the number of Bell machines in its fleet.

The machines chosen are from the new generation E-series, which offers increased production payloads, lower daily operating costs, superior ride quality and uncompromised safety standards, as well as the lowest fuel cost per tonne on the market.

The choice of the smallest size in the Bell ADT fleet – the 25-ton B25E – reflects the importance of having a high-quality, robust dump truck capable of working within the often confined spaces following a demolition.

“The Bell B25E is the ideal size for our purposes and we’re getting the excellent results we anticipated,” concludes John.

“It is, in part, for applications such as these that we supply a 25-ton ADT, so we’re delighted that John F Hunt has recognised the advantages of choosing a smaller machine capable of exceeding expectations in tight working environments,” confirms Richard Higgott, Sales and Marketing Manager at Bell Equipment UK.
