

E-series

Articulated Dump Trucks

B35E | B40E | B45E | B50E • PIN3

Stage V Certified

BELL

E is for evolution

Your business is our business. Bell Articulated Dump Trucks haul more, for longer at the lowest cost-per-ton to deliver more on your profit margins.

As a global leader in Articulated Dump Trucks, Bell Equipment brings you the world class E-series range. The evolutionary E-series is packed with class leading features that deliver production boosting payloads, lower daily operating costs, superior ride quality and uncompromised safety standards.

Bell E-series ADTs will give your business the competitive edge you need.

- Extensive use of high-strength, lightweight materials give these trucks the best payload-to-mass ratios and hauling efficiencies in each class.

- With their oscillating frame and high-floatation tyres, Bell trucks won't leave you stuck on muddy, rutted or hilly terrain.

- The redesigned sound-suppressed cab features fatigue-beating controls, advanced diagnostic monitor and a sealed switch module for convenient, fingertip operation of numerous functions.

- Fuel-efficient emission certified engines deliver clean power without compromise in all conditions. Leading-edge emissions technology ensures rapid engine response and dependable cold-start performance.

The E-series range takes ADT functionality to new industry standards, with customer-focused enhancements and the highest level of automated machine protection available.

Through substantial investments in Research and Development and employing industry leading technology, advancements in the key areas of performance and fuel efficiency – help you to move more material at lower operating costs and environmental impact.

Specifications	B35E	B40E	B45E	B50E
Maximum net power	320 kW (429 hp)	380 kW (510 hp)	390 kW (523 hp)	430 kW (577 hp)
Operating mass				
Empty	34 019 kg (74 999 lb)	34 596 kg (76 273 lb)	35 479 kg (78 217 lb)	38 287 kg (84 408 lb)
Loaded	67 519 kg (148 854 lb)	73 596 kg (162 251 lb)	76 479 kg (168 607 lb)	83 687 kg (184 498 lb)
Rated payload	33 500 kg (73 855 lb)	39 000 kg (85 980 lb)	41 000 kg (90 390 lb)	45 400 kg (100 090 lb)
2:1 heaped capacity	20,5 m ³ (27 yd ³)	24 m ³ (31 yd ³)	25 m ³ (33 yd ³)	27,5 m ³ (36 yd ³)

Building on pedigree

Building on from the proven D-series platform, Bell Equipment's evolutionary approach to design delivers optimised power-to-weight ratio and legendary fuel efficiency.

- Automatic Traction Control (ATC) is achieved with speed sensors providing feedback to the truck on-board computer. The computer then controls differential lock activation as needed. This coupled with best in class rear suspension travel results in unparalleled off-road ability.

- Automatic retardation slows the truck when the operator backs off the accelerator pedal for more confidence on steep grades.

- An industry leading, fully automatic seven-speed planetary transmission with torque converter lock-up maximises fuel efficiency.

- High-travel suspension keeps all tyres in constant contact with the ground, for optimum traction.

- Electronic common rail fuel system provides high injection pressures even at low engine speed for improved cold-starting ability, low-speed response and reduced emissions.

- Careful engine packaging and front chassis design gives the best approach angle to allow these ADTs to attack steep terrain.

- Improved payloads, faster haul cycles and industry leading fuel economy all help you move more material at a lower-cost-per-tonne than your competitors.

- Optimised payload-to-weight ratio decreases your cost per tonne because more of your fuel cost is spent moving the material, not running the machine.

Planetary powershift transmission optimises shift points to match conditions and vehicle weight while protecting the transmission from operator error and abuse. Allison FuelSense® calibration optimises production and fuel burn.

The transfer case inter-axle differential delivers equal torque to each axle when traction is favourable. When conditions deteriorate, the diff-lock automatically engages to deliver torque to the tyres that can best use it.

High-strength steel and widely spaced taper roller bearings in the articulation area enhance long-term durability.

A tailgate is available as an option for better material retention. The tailgate opens as the bin is raised for dumping. Spring steel straps maintain positive seal throughout the haul, ensuring minimal material is lost.

Our innovative front and rear comfort ride suspension options are offered to even further enhance ride quality and ensure minimal whole body vibration exposure.

Productivity increases through reduced cycle times, and reduced haul road maintenance are even further benefits of these extremely successful systems. Experienced ADT operators who have driven trucks installed with these systems have come away amazed by the comfort of the machine, as well as the confidence that the adaptive front suspension engenders.

Uncompromised durability

Built smarter, to work harder.

Bell ADTs offer optimised machine weights so you spend more time and money moving material and not running the machine.

With decades of ADT experience, the Bell E-series articulated hauler is designed and manufactured using purpose built, reliable Bell components best suited for the toughest of conditions.

The central oscillation joint, high suspension travel on all axles, and balanced weight distribution provide the agility and ability to navigate hostile terrain.

The high-strength steel chassis delivers strength and rigidity without excess weight.

- Fully enclosed, flooded, dual circuit wet disc brakes offer superior braking performance and extended service life essential for wet and muddy conditions. Oil-immersed wet-disc brakes are virtually maintenance-free and now feature a high flow circulation system with filtration and cooling.

- Viscous electronically controlled direct-drive engine fans provide cooling for the best efficiency.

- Class leading engine braking, coupled with automated brake retardation, provides superior braking power. Brake retardation is at pressures low enough to ensure no contact between the wet brake plates, and therefore no wear.

For comfortable productivity, the A-frame suspension system coupled with hydropneumatic suspension struts reduce the lateral vibration often experienced with off-road conditions. A superior suspension seat provides additional isolation for the operator.

Rough terrain demands tough suspensions. Heavy-duty components absorb shocks and come back for more. You get best-in-class suspension travel and ground clearance, too.

Other uptime-boosting features include world class on-board diagnostics with live stream functionality, solid-state sealed switches and satellite fleet management system.

High-strength welded-alloy steel chassis and reinforced articulation joints, offer superior strength and durability with optimised weight for class leading power-to-weight ratio. Lower machine mass reduces powertrain and structural stress.

Run leaner and cleaner

A combination of an optimally tuned engine and weight optimised complete machine package ensure that Bell ADTs have a minimal carbon footprint.

SCR uses AdBlue®/DEF which

- is non-toxic, odorless, low cost and simple to refill.
- is injected into the flow of the exhaust gases and reacts with the NOx gases in the catalytic convertor to form harmless nitrogen and water.
- is consumed at approximately 3-5% of your fuel usage.

EGR

- recirculates burnt exhaust gas back into the combustion chamber, lowering combustion temperatures and NOx production.

DPF

- Our DPF technology has been used in Mercedes-Benz road trucks for over 10 years.
- Regeneration is done during normal operation as much as possible.
- In light applications stationary active regeneration may be necessary.

- Reduced emissions
- Improved engine efficiency
- Lower fuel consumption
- Improved power
- Improved torque
- Improved engine response

- Stage V emissions control coupled with the lowest fuel burn ensures the lowest environmental impact.

Our E-series truck platform easily accommodates current engine and related emissions control technology and reflects our strategy of continuous improvement.

Bell Equipment's evolutionary E-series runs SCR-technology (Selective Catalytic Reduction) in combination with EGR to give an industry leading standard in fuel-efficient emission control, designed specifically for the off-highway market to be compliant to Tier 4f. Engine power and fuel consumption have been further optimised through event dependent software that controls retardation, cooling and charging of accumulators.

Operate with ease

Using the latest in automotive technology and state-of-the-art tooling, the E-series takes operator experience to new heights.

Climb into the cab of a Bell ADT and you will feel right at home. Its quiet, spacious interior, ergonomically positioned operator station and climate-controlled cabin is loaded with productivity boosting comfort and convenience features that minimise operator fatigue and enhance the operator's experience.

Modern flowing lines, in keeping with current styling trends on road vehicles, offer unsurpassed levels of visibility.

From the state-of-the-art 10" full colour screen, automotive mouse interface and sealed switch module with centrally located sealed display unit to air suspension seat, tilt/telescoping steering wheel and optional CD player with high-output speakers, the E-series provides everything your operators need to perform at their best.

- The standard sound-suppression package significantly reduces noise levels and operator fatigue.
- A fully adjustable air-suspension seat with variable damping, auto height adjust according to operator weight, pneumatic lumbar support and multipoint harness for class-leading comfort and safety.
- New machine styling and cabin design improvements, which include full glass access door and high visibility mirror package, provide exceptional all-round visibility.

- The adaptive transmission control adjusts clutch engagement to ensure smooth, consistent shifts throughout the life of the truck.
- A purpose designed HVAC climate control system with automotive-style louvres keeps the glass clear and the cab comfortable.
- You won't find retarder pedals or levers in a Bell truck. Retarder aggressiveness is simply set on the switch pad. Or Hill Descent Control can set it for you automatically.

Easy-to-understand instruments and intuitive controls wrap around the operator so they're easier to view and operate.

A user friendly 10" colour monitor offers vital operating information, safety warnings, detailed diagnostic readings and dump body function settings.

An automotive controller provides menu navigation on the colour monitor to extract information on machine operation and adjustment of machine settings.

Convenient sealed switch module provides fingertip control of numerous productivity enhancing functions including: **Keyless Start, I-Tip, Dump Body Upper Limit, Soft Stop/Hard Stop Selection, Retarder Aggressiveness and Speed Control.**

Safety, our business too

By listening to users and delivering on expectations in an ever changing workplace, we provide a truck that leads in application safety with numerous groundbreaking innovations.

Independent features such as Keyless Start, Hill Assist, Bin Tip Prevention, Auto Park Application (APA), Standard Turbo Spin Protection and On-Board Weighing (OBW) are still standard on the E-series.

For improved safety and productivity, the E-series has Automatic Traction Control (ATC).

- Full handrails (to ISO 2876) can be installed to offer improved safety when performing engine checks.
- The park brake automatically applies when neutral is selected and it is not possible to engage neutral at speed. Torque dependent park brake release (Hill Assist) ensures no roll back on slopes.
- All trucks can be set up to automatically sound the horn when starting or switching between forward and reverse.

- Best-in-class retarder and engine braking automatically applies when the operator lifts his foot off the accelerator. Retarder aggressiveness can be simply adjusted on the sealed switch module ensuring maximum descent control for all conditions.
- Multiple geofencing in challenging site conditions ensures safe machine operation, such as downhill speed control, geofence speed limits and bin restrictions.

Our quiet operator cabins are ROPS/FOPS certified with an air suspension operator seat. The trainer seat has a retractable lap belt while the operator seat has a standard 3 point seat belt. Both have automatically locking retractors.

An optional integrated reverse camera and high visibility mirrors ensure superior all round visibility.

Keyless start, driver identity and access codes ensure no unauthorised operation of your equipment.

The exclusive on-board weighing presents the operator with real time information on the payload while the machine is being loaded. A 'speed restriction' mode can also be activated if the machine is significantly overloaded.

The incorporation of a pitch and roll sensor in the vehicle prevents bin operation if the truck is in an unsafe position.

Both operator or site selectable maximum speed control allows the vehicle to automatically decelerate and apply the retarder to prevent onsite speeding.

Maximise your uptime

The E-series is loaded with features that make it as easy to maintain as it is to operate. Spend less time and expense getting ready for work and more time getting work done.

Easy-to-reach dipsticks, see-through reservoirs, sight gauges and grouped service points make quick work of the daily routine. Quick change filters, extended engine and hydraulic oil-service intervals lower daily operating costs and provide superior machine uptime.

An industry leading 10" colour monitor offers on-board machine diagnostics as well as automated daily service functionality, this coupled with diagnostic test ports help you troubleshoot and make informed maintenance decisions on site.

If something goes wrong, the diagnostic monitor provides service codes and supporting info to help diagnose the problem.

The cab can be tilted in minutes without special tools, for convenient service access to drivetrain components.

An in-cab load centre simplifies fuse replacement. Fewer relays, connectors and harnesses mean higher reliability.

We offer a remote transmission filter option. They make transmission filter replacement a fast and clean task.

- Automated daily service checks can be done with ease and comfort from inside the operator station using the 10" colour LCD monitor and sealed display controller.

- The load-sensing hydraulic system was designed with simplicity in mind, while maintaining efficiency. Fewer components for improved reliability and serviceability.

- Extended engine transmission and hydraulic oil-change for increased uptime and lower operating cost.

- Available environmental drains allow quick, no-spill changes.

- Your Bell Service Centre has the parts and backup you need to stay productive and offers a wide variety of preventative maintenance and support programmes to help you control costs.

See-through fluid reservoirs and sight gauges let you check fluid levels at a glance.

Easily accessible test ports allow technicians to troubleshoot problems more quickly.

The centralised lube bank places difficult-to-reach grease points within reach.

The convenient and easy to understand RSG decal details daily checks and actions (eg: greasing).

Welcome to the ...

Smarter fleet management

Cutting edge technology, helping you run your fleet smarter. Providing accurate, up-to-date operational data, production data and diagnostic data.

The key to a productive and profitable fleet, lies in the ability to monitor and manage your machines and operators efficiently. Machine operational data is processed and compiled into useful production and performance statistics, accessible via the Bell Fleetm@tic® website. These reports are also automated and emailed directly to you. The two monitoring packages that we have available, are:

- **The Classic Package** supplies you with good enough information for you to have a very good understanding of how your machine is operating for each shift that it runs. This package comes standard with the machine for 2 years.
- **The Premium Package** is focused on customers who need to have extremely detailed information of the machine's operation. For this package we offer similar information to that of the Classic Package but for each individual laden - unladen cycle. In addition, live tracking is available on the Fleetm@tic® website on a per minute basis.

Fleetm@tic®:

- Maximise productivity
- Generate machine utilisation reports
- Identify operator training requirements
- Pro-active maintenance planning
- Implement safety features
- Receive machine fault codes as well as suggested trouble shooting procedures
- Protect investments
- Receive real time geospatial data

Gradeability/Rimpull

1. Determine tractive resistance by finding intersection of vehicle mass line and grade line. NOTE: 2% typical rolling resistance is already assumed in chart and grade line.
2. From this intersection, move straight right across charts until line intersects rimpull curve.
3. Read down from this point to determine maximum speed attained at that tractive resistance.

Retardation

1. Determine retardation force required by finding intersection of vehicle mass line.
2. From this intersection, move straight right across charts until line intersects the curve. NOTE: 2% typical rolling resistance is already assumed in chart.
3. Read down from this point to determine maximum speed.

B40E Articulated Dump Truck

ENGINE	TRANSFER CASE	WHEELS	DUMPING SYSTEM

Gradeability/Rimpull

1. Determine tractive resistance by finding intersection of vehicle mass line and grade line. NOTE: 2% typical rolling resistance is already assumed in chart and grade line.
2. From this intersection, move straight right across charts until line intersects rimpull curve.
3. Read down from this point to determine maximum speed attained at that tractive resistance.

Retardation

1. Determine retardation force required by finding intersection of vehicle mass line.
2. From this intersection, move straight right across charts until line intersects the curve. NOTE: 2% typical rolling resistance is already assumed in chart.
3. Read down from this point to determine maximum speed.

B45E Articulated Dump Truck

ENGINE	TRANSFER CASE	WHEELS	DUMPING SYSTEM
Manufacturer Mercedes Benz (MTU)	Manufacturer Kessler	Type Radial Earthmover	Two double-acting, single stage, dump cylinders.
Model OM471LA (MTU 6R 1300)	Model W2400	Tyre 29.5 R 25 (875/65 R 29 optional)	Raise Time 12 seconds
Configuration Inline 6, turbocharged and intercooled.	Layout Remote mounted	FRONT SUSPENSION Semi-independent, leading A-frame supported by hydro-pneumatic suspension struts. Optional active dual springrate Comfort Ride suspension available, including height control.	Lowering Time 11 seconds
Maximum Net Power 390 kW (523 hp) at 1 600 rpm in accordance with UN ECE R120	Gear Layout Three in-line helical gears		Tipping Angle 70 deg standard, or any lower angle programmable
Gross Torque 2 600 Nm (1 917 lbf) @ 1 300 rpm	Output Differential Interaxle 29/71 proportional differential. Automatic inter-axle differential lock.	REAR SUSPENSION Pivoting walking beams with laminated rubber suspension blocks. Optional passive dual-springrate Comfort Ride walking beam available.	PNEUMATIC SYSTEM Air drier with heater and integral unloader valve, serving park brake and auxiliary functions.
Displacement 12,8 litres (781 cu.in)	AXLES		System Pressure 8,1 Bar (117 psi)
Auxiliary Brake Jacobs Engine Brake®	Manufacturer Bell		ELECTRICAL SYSTEM
Fuel Tank Capacity 352 litres (93 US gal)	Model 30T		Voltage 24 V
AdBlue® Tank Capacity 40 litres (11 US gal)	Differential High input controlled traction differential with spiral bevel gears	HYDRAULIC SYSTEM Full load sensing system serving the prioritized steering, body tipping and brake functions. A ground-driven, load sensing emergency steering pump is integrated into the main system.	Battery Type Two AGM (Absorption Glass Mat) type.
Certification OM471LA (MTU 6R 1300) meets EU Stage V / EPA Tier 4 Final emissions regulations	Final Drive Outboard heavy duty planetary on all axles.		Battery Capacity 2 X 75 Ah
TRANSMISSION	BRAKING SYSTEM	Pump Type Variable displacement load sensing piston	Alternator Rating 28V 100A
Manufacturer Allison	Service Brake Dual circuit, full hydraulic actuation wet disc brakes on front and middle axles. Wet brake oil is circulated through a filtration and cooling system.	Flow 300 L/min (79 gal/min)	MAX. VEHICLE SPEED
Model 4700 ORS	Maximum brake force: 327 kN (73 513 lbf)	Pressure 310 Bar (4 500 psi)	1st 4 km/h 2,5 mph
Configuration Fully automatic planetary transmission.	Park & Emergency Spring applied, air released driveline mounted disc.	Filter 5 microns	2nd 9 km/h 6 mph
Layout Engine mounted	Maximum brake force: 218 kN (49 008 lbf)		3rd 17 km/h 11 mph
Gear Layout Constant meshing planetary gears, clutch operated	Auxiliary Brake Jacobs Engine Brake®. Automatic retardation through electronic activation of wet brake system.	STEERING SYSTEM Double acting cylinders, with ground-driven emergency steering pump.	4th 23 km/h 14 mph
Gears 7 Forward, 1 Reverse		Lock to lock turns 4,5	5th 33 km/h 21 mph
Clutch Type Hydraulically operated multi-disc	Total Retardation Power Continuous: 442 kW (593 hp) Maximum: 854 kW (1 145 hp)	Steering Angle 42°	6th 44 km/h 27,3 mph
Control Type Electronic			7th 51 km/h 32 mph
Torque Control Hydrodynamic with lock-up in all gears.			R 7 km/h 4 mph
			CAB ROPS/FOPS certified 77 dBA internal sound pressure measured according to ISO 6396.
