Articulated Dump Trucks

B30E | B45E | B60E • PIN3

Tier 4 final/Stage V Certified

- Same payload as 6x6 models
- Smaller turning circle than similar sized 6x6 model
- Highly maneuverable in tight spaces
- No tire scuff means less tire and road surface damage

BELL

The All-Wheel Drive advantage

The Bell 4x4 range, comprising a 30-ton, 45-ton and 60-ton model, offers customers the same tonnage as our traditional Articulated Dump Trucks (ADTs), at a related lower cost per ton while still offering off-road capabilities that non-ADT solutions cannot match.

The range has been developed through the Bell tradition of listening to our customers. They were looking for a machine that would perform better than conventional haulage solutions in slippery and undulating conditions but didn't need the 'go anywhere' ability of a 6x6 ADT. In response Bell has filled this conspicuous gap in the market with its practical 4x4 alternatives.

Equipped with two-axes, these ADTs are based on the proven articulated technology of their corresponding

6x6 models. This applies entirely to the powerhead of the vehicles where the proven SSM (sealed switch module), CDU (central display unit) and B-drive automotive controller architecture combine to provide the full array of standard Bell productivity and safety features, including i-Tip, Tipsafe, Hill Assist and onboard weighing with Fleetm@tic® integration. Bell 4x4 ADTs continue to set benchmarks in terms of reliability, efficiency and driving comfort with their practical design.

Delivering productivity during adverse weather conditions where rigid machines are unable to operate, the Bell 4x4 range also tolerates less site maintenance, which has large cost and hassle implications for many sites. In addition, 4x4 trucks are proven to cause less road damage than a 6x6 ADT, where the three-axle configuration tends to scuff the road surface when turning.

- The machine provides superior retardation through all wheels, increasing braking efficiency and reducing wear.

- These features combine to provide superior tire life compared to similar sized rigid trucks in almost all applications.

- Adaptive front suspension provides superior ride comfort whilst rear suspension on the B45E and B60E improves comfort even further, which ultimately results in higher productivity.

- The flat-bottom bin design reduces carryback, increasing efficiency and reducing contamination in certain applications.

- In deep, soft mud they won't necessarily match their three-axle counterparts, but they have proven themselves to be more than capable machines in challenging conditions.

- The oscillation joint, inherited from the proven Bell 6x6 range, is what makes an ADT by keeping the wheels on the ground to ensure traction when driving over rough terrain.
- Articulated steering between the front and rear chassis produces much tighter turning circles than most steered axle trucks and make the Bell 4x4 range ideal for tight sites.
- By configuring the driveline to direct drive to all wheels, Bell 4x4 trucks can go places where conventional trucks cannot.

M

The **B30E 4x4** is internationally successful as a most economical solution for bulk handling.

L

The **B45E 4x4** is designed for flexible use in quarrying and smaller mining operations.

XL

The **B60E 4x4** has been uncompromisingly engineered for high productivity in mining under all weather conditions.

Smarter fleet management

Cutting edge technology, helping you run your fleet smarter. Providing accurate, up-to-date operational data, production data and diagnostic data.

The key to a productive and profitable fleet, lies in the ability to monitor and manage your machines and operators efficiently. Machine operational data is processed and compiled into useful production and performance statistics, accessible via the Bell Fleetm@tic® website. These reports are also automated and emailed directly to you. The two monitoring packages that we have available, are:

- **The Classic Package** supplies you with good enough information for you to have a very good understanding of how your machine is operating for each shift that it runs. This package comes standard with the machine for 5 years.
- **The Premium Package** is focused on customers who need to have extremely detailed information of the machine's operation. For this package we offer similar information to that of the Classic Package but for each individual laden - unladen cycle. In addition, live tracking is available on the Fleetm@tic® website on a per minute basis.

Fleetm@tic®:

- Maximize productivity
- Generate machine utilization reports
- Identify operator training requirements
- Pro-active maintenance planning
- Implement safety features
- Receive machine fault codes as well as suggested trouble shooting procedures
- Protect investments
- Receive real time geospatial data

5 microns

STEERING SYSTEM

Double acting cylinders, with ground-driven emergency steering pump.

Lock to lock turns

5.5

Steering Angle

42°

DUMPING SYSTEM

Two double-acting, two stage telescopic, dump cylinders

Raise Time

18 seconds

Lowering Time

16.5 seconds

Tipping Angle

55 deg standard, or any lower angle programmable

PNEUMATIC SYSTEM

Air drier with heater and integral unloader valve, serving park brake and auxiliary functions.

System Pressure

117 psi (8.1 Bar)

ELECTRICAL SYSTEM

Voltage

24 V

Battery Type

Two AGM (Absorption Glass Mat) type

Battery Capacity

2 X 75 Ah

Alternator Rating

28V 100A

MAX. VEHICLE SPEED

1st	2.5 mph	4 km/h
2nd	5.6 mph	8 km/h
3rd	10.6 mph	16 km/h

Gradeability/Rimpull

1. Determine tractive resistance by finding intersection of vehicle mass line and grade line. NOTE: 2% typical rolling resistance is already assumed in chart and grade line.
2. From this intersection, move straight right across charts until line intersects rimpull curve.
3. Read down from this point to determine maximum speed attained at that tractive resistance.

Retardation

1. Determine retardation force required by finding intersection of vehicle mass line.
2. From this intersection, move straight right across charts until line intersects the curve. NOTE: 2% typical rolling resistance is already assumed in chart.
3. Read down from this point to determine maximum speed.
